# Basic Structure: Highly Rigid Body & Thermal Stability

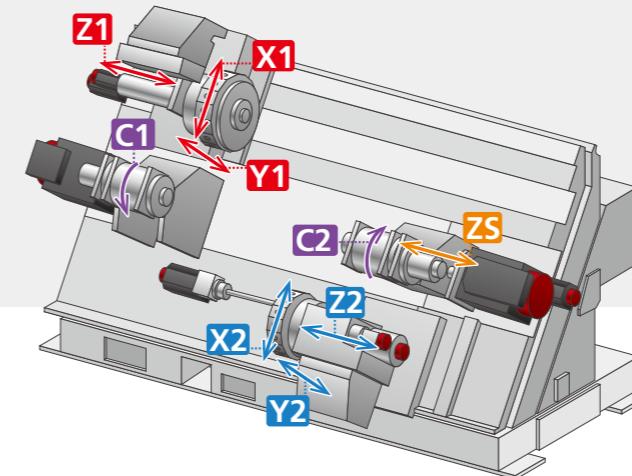

We used FEM analysis to simulate the structure's deformation under load and thermal deformation. By making fine adjustments to every detail, from the thickness of the bed to the shape and arrangement of the ribs. We achieved high flexural rigidity and small thermal deformation.

# Workability and Maintainability

## Easy access to spindle

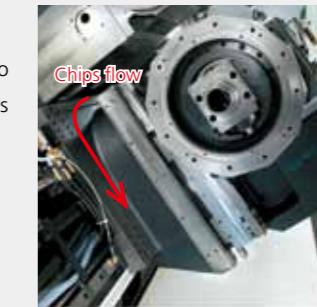

The MT100 and MT200 are designed to ensure easy access to the main spindles by reducing the distance between the machine front and the spindle center.

MT200: 1150 mm

MT100: 1100 mm

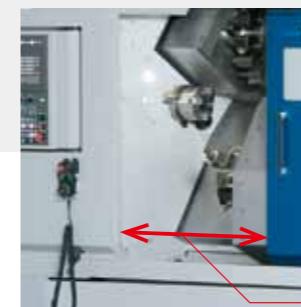

MT200: 635 mm

MT100: 690 mm

## Lower turret chip flow

The lower turret is designed with appropriate space for chips to fall so that accumulation does not occur. (MT200)

## Wide door opening

Our wide opening door allows work-holding, replacement, tool changeover and maintenance jobs to be easily performed.

MT200: 920 mm

MT100: 760 mm

## Operation panel

The buttons and layout of the operation panel are specifically designed to allow for easy operation of the three turrets.

# Application

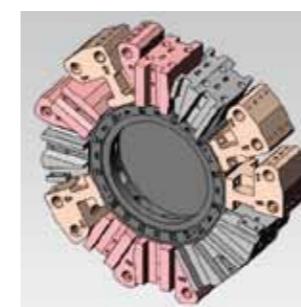

## Parts catcher

A finished workpiece of maximum size (MT100: Ø51 x 150, MT200: Ø65 x 160) can be unloaded from the right spindle automatically using the integrated 'Parts Catcher'. A combination of both the 'Parts Catcher' and a 'Bar Feeder' allows for unattended operation of both Bar and Chuck work.

## Manual tool setter

Tool changeover time can be significantly reduced by utilizing the available Tool Setter. The Tool Setter is manually installed and is used to check the tool gauge lengths for both the upper and lower turrets. The Tool Setter can be manually mounted on both the left and right spindles and is manually removed from the machine during operation.

## Special lower turret (MT200)

With special tooling blocks, it is possible to utilize 24 stations on the lower turret (Non-Live Tool Specification).

This feature provides reduction in changeover time which in turn increases productivity.

Integrated Operation &  
Programming Guidance with  
extremely simplified operations
